## NGR16

Operates on  
power generator  
or a  
12V battery

The new **NGR16** (manufactured in Greece) is an innovative olive harvester with 12VDC battery operation. It carries 2 elastic spheres with sticks, each one with individual vibrating motion and 360° coverage.

The new **NGR16** is suitable for all olive tree varieties. It has high productivity rates and is available in lengths from 2.4m up to 3.4m using an extension. Its performance is optimum for both the outer and inner parts of the tree and its head enters into the densest parts without getting tangled with the branches. Due to its motion and the soft material of its elastic sticks the new NGR16 does not damage the branches, leaves or the fruits of the tree.

The new **NGR16** is made of durable materials and it is designed for long and continuous operation. The new **NGR16** is environmentally friendly with low noise levels and does not transfer vibrations to the user. It is also **extremely lightweight**, easy to use and no special maintenance is required.

It is an efficient, cost effective and reliable harvester.

For those of you who have AgrotechNIC Harvesters already, we will also be stocking a range of spare parts.

Call us now on (03) 547 6874 or [sales@allendalegp.co.nz](mailto:sales@allendalegp.co.nz) to order.
